At formation of aerosols and mist:

In case of brief exposure or low pollution use a respiratory filter device. In case of intensive or longer exposure use a respiratory protective device that is independent of circulating air.

### **Protection of hands:**

Chemical resistant gloves (EN 374)

The glove material has to be impermeable and resistant to the product/substance/preparation.

Due to missing tests no recommendation to the glove material can be given for the product / preparation / chemical mixture.

Selection of the glove material in consideration of the penetration times, rates of diffusion and the degradation

### **Material of gloves:**

Butyl rubber, BR

Nitrile rubber, NBR

Plastic gloves

The selection of suitable gloves depends upon the material, and also upon the quality of the gloves. The degree of protection will vary from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

### **Penetration time of glove material:**

>480 min. (8h)

The above-mentioned times are based on reference values as per EN 374. Under practical conditions (33 °C – taking into account the body temperature), the maximum wearing time is to be limited to one-third.

The exact penetration time has to be found out by the manufacturer of the protective gloves and has to be observed.

### **Not suitable are gloves made of the following materials:**

Leather gloves

Strong gloves

### **Eye protection:**

Safety glasses

### **Body protection:**

Protective work clothing
